

Real Mohsin

Front End Engineer

Experienced Front End Engineer, specializing in the React ecosystem, who enjoys the fast-paced field of web development.

Experience

2021 - Present

Software Engineer @ Uptycs

Building the UI for the first cloud-native security analytics platform enabling both cloud and endpoint security from a common solution. Responsible for design and development of complex dashboards that are used by security engineers to diagnose and treat critical vulnerabilities in software. Served as technical lead in the implementation of client side caching.

2018 - 2021

Front End Engineer @ *realmohsin.com* (Freelance)

Development of high quality web applications and websites using a web-standards approach to increase usability, search engine optimization and performance. Provided technical direction to solve complex issues clients faced regarding ecommerce on the web. Created and integrated online payment systems for online businesses. Facilitated the transition of legacy codebases to modern technologies such NextJs.

2015 - 2017

Front End Engineer @ *Rivi Consulting LLC*

Worked with designers and product management within an Agile environment to develop features using React for single-page applications. Owned initiatives such as mobile-first responsive design and performance optimization. Utilized and leveraged many of the integral tools in the React ecosystem – Redux, React-Router, Babel, Webpack, and Jest.
